AIR CONDITIONING

Control the air conditioning engines from every room with the remote control, by using the screen, your mobile or Internet. Save energy with automatic disconnection when leaving your home, or with the "sleep" saving energy mode for short time outings.

LOCKS

Blinds, canopies and curtains will perform by pre-established conditions, allowing you to open blinds at a programmed time and date, lower canopies according to the inside lighting or open up them automatically if the wind or weather conditions may be potentially dangerous or uncomfortable. The curtains can close and open themselves depending on the lighting of the inside. All this features are at your hand's reach with just a button.

ENJOY THE BEST MUSIC IN ALL AMBIENCES

Audio system distributed in all the rooms in which you are able to choose the input drive - radio, CD, Mp3 files... Best functionality guaranteed by a simplified remote control and a tactile screen.

INTELLIGENT LIGHTING

Module light's intensity of every room, create comfortable ambiances according to the activities and uses of the rooms in each moment. If desired, the human presence detectors will turn on the lights when human activity is detected. Lights will automatically turn off after a while if no one is in the room. This function will save an important amount of energy. Moreover, you can turn off all the lights at a time by activating the "Good Night" function.

REMOTE ACCESS

Access all your house's services from a mobile phone or Internet to make sure that everything is alright or to manage certain functions allowed by long distance remote access. You will be able to turn on/off the air conditioning, turn on/off the irrigation system, open up canopies, activate security alarm system or the "presence simulator" option.

SECURITY

FIRE - GAS

High-tech detectors will look after air / gas levels to protect you from intoxications, and will detect the beginning of an undesired fire in all the perimeter. Gas supply will automatically stop and several alarm signals will be sent by e-mail, short message or voice message on your phone.

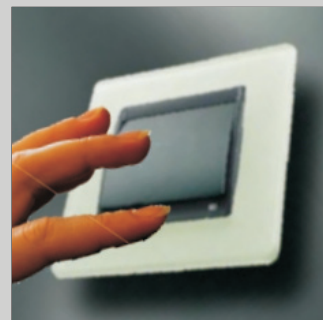

FLOODS

As explained in the possible fire/gas problems, the water losses or floods will be detected, the supply will be stopped, and several alarm signals will be sent by e-mail, short message or voice message on your phone.

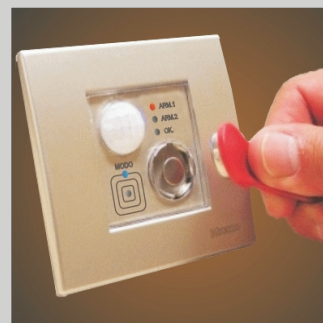

PANIC FUNCTION

For security or medical emergencies you will have a push-button placed in a strategical point of the house that allows you to send SOS signals via short message, e-mail or voice message on your phone.

ACCESS CONTROL

Using an electronic key will let you administer the alarm signals as well as generate entrance and exit scenes of your house. You can choose between "Short exit" and "Long exit", generating different options for each case. Lights, blinds, supply, air conditioning, etc., all with just a turn of your electronic key. You will manage several keys with different permissions and timings. A high range movement detector completes this functionality.

SPECIAL FUNCTIONS

With functions such as the presence Simulator, your house it self will do several daily actions automatically light and music management, canopies and blinds movements... You can program daily or weekly timings that will let you manage ambience modes, irrigation system, or access restriction to special zones.
